

[YOUR BRAND]

The Content Automation System

One system to research, create, caption, schedule, and post — for any platform, any offer. Set it up once. You approve every post.

SET UP ONCE (A-G)

ANY PLATFORM

4 APPROVAL GATES

Your step-by-step SOP | v2

What this is (read first)

A repeatable system that runs your content like a small team: it **researches** what to post, **creates** the visual, **writes** the caption, **schedules** it, and **posts** it — while **you approve at four points** so nothing goes out you didn't sign off on. It's not tied to a niche. Set it up once (Part 1), then run any account through it (Part 3 shows real examples: Pinterest affiliate, a quote page, a travel account, client work).

RESEARCH → CREATE → CAPTION → SCHEDULE → POST

what to post	Higgsfield/	hook + link	Postiz (IG,	it goes live
+ the offer	Canva + your	+ disclosure	Pinterest...) /	on time
	own photos		Higgsfield(TikTok)	

The 4 gates you control: ① approve what to post · ② approve the visual · ③ approve the caption + link · ④ final go before it publishes.

Part 1 — Set it up once (A → G)

A. Connect Postiz (your scheduler for Instagram, Pinterest, Facebook, LinkedIn, X, etc.). Sign up here: postiz.pro/melannie-carranza-iglesias. Connect each account you post to.

B. Connect Higgsfield — generates and animates visuals, and publishes directly to TikTok (Postiz can't post TikTok — this is the TikTok rail). [add your Higgsfield affiliate link here]

C. Connect Canva — for graphics, text-on-image (quotes), Pinterest pins, covers, and overlays. [add your Canva affiliate link here]

D. Make your Asset Folder. On your own computer, create one folder for the images/clips you want to use — organized in subfolders (e.g. /products, /travel-photos, /client-name). When you run Claude on your computer (with file access), it **reads that folder** and pulls the right assets into the content. This is how your real photos get used.

E. Set up your Tracker (Airtable). One row per post, moving through the statuses. It's your control panel and where you approve. (Template provided with this system.)

F. Fill your Account Profile. The one thing that makes it "yours" — fill these five lines once per account:

PLATFORM:	_____	(IG / Pinterest / TikTok / client's)
OFFER:	_____	(affiliate link / UGC deliverable / client brand)
VOICE:	_____	(funny / aspirational / clean / expert)
LOOK:	_____	(your locked look: light, palette, style)
ASSETS:	_____	(generate fresh / pull from my folder / both)

G. Set your schedule. Pick your slots (e.g. 1/day) and let Postiz publish on time. Refill weekly (Part 5).

Part 2 — How the content actually gets made

The "Create" step, in plain terms. This is what happens after you approve a thing to post:

Your Asset Folder → Claude reads what's there

- |
- └─ need a NEW visual / animation? → HIGGSFIELD (generate or animate → 9:16 / 4:5 / pin)
- └─ need a GRAPHIC / quote / pin / cover? → CANVA (text-on-image, layouts)
- └─ have a REAL photo to use? → pull it from the folder, enhance/reframe

↓
finished asset → caption + link + #ad → into the Tracker for your approval

You tell Claude what you want ("make a pin for this product", "animate my travel photo", "quote graphic in my style"); it routes to Higgsfield or Canva accordingly and pulls from your folder when you point it there.

Part 3 — The variations (run any account through it)

Same system. Only the profile, the research, and the create-route change.

1 · Pinterest affiliate

Research	Create	Rail	Offer
pin-worthy trending products / keywords	Canva vertical pins (2:3), text overlay	Pinterest via Postiz	affiliate link on the pin

2 · Quote / faceless IG account

Research	Create	Rail	Offer
themes + quote angles that resonate	Canva text-on-image in your locked look	Instagram via Postiz	growth / bio-link / affiliate

3 · Travel IG (affiliate + UGC collab)

Research	Create	Rail	Offer
destinations, gear, brand angles	Your photos (from folder) + Higgsfield polish/animation	IG (Postiz) + TikTok (Higgsfield)	affiliate links + UGC brand deliverables

4 · Client organic posting (done-for-you)

Research	Create	Rail	Offer
client's brand, topics, calendar	Higgsfield/Canva per client brand + client's assets	client's platforms via Postiz	the client pays you; they approve

Multi-tenant: each client = its own profile + folder + accounts. Never mix one client's content onto another's accounts.

Part 4 — The two posting rails (important)

⚠ TikTok and everything else use different tools.

Rail	Tool	Covers
Scheduler	Postiz	Instagram, Pinterest, Facebook, LinkedIn, X, Threads...
TikTok	Higgsfield only (or manual upload)	TikTok — Postiz does not post TikTok

Part 5 — The weekly loop

ONE SESSION / WEEK: research → create a batch → caption all at once → approve → schedule the week → it publishes itself → check results → next week's research repeats it

Batch by task (all research, then all creation, then all captions) — far faster than doing one post start-to-finish seven times.

The one rule that keeps you safe

Every post with an affiliate link carries a clear disclosure (#ad or equivalent), near the top — not buried. It's FTC-required in the US and costs you nothing in trust. Never promise guaranteed results or income.

The Content Automation System — brand this as your own. Set up once, run any account through it.
